PROJECTS

FREE THE GAMES | Website
HTML | SCSS | JavaScript | AXIOS
- A website created to view information on all current free games to play
- Used Axios to fetch API data to dynamically display all the Games info
- JavaScript was used to dynamically create and display HTML elements with CSS classes that display smoothly and are visually pleasing
- Made dynamic filtering of categories by tag as well as dynamic list count view per page based on JavaScript logic
- Used Intersection Observer for animations to start interactively by viewer

DRESS-UP GAME | HTML Game
HTML | SCSS | JavaScript
- Game where you just pick from a set of cloth items and features to create your own customized character
- Created logic flow that made dynamic hue and brightness change possible dynamically
- Used arrays and and nested objects to complete detailed logic

DRAMA LISTER | Windows Program
C# | Windows Forms
- A CRUD program with the goal to capture, store, update, and read listings of Shows/Dramas watched
- Each show/drama listed has their own property of rating, comments, genre, episode count, etc
- Lists can be saved as an encoded binary file as well as read back when loaded

EXPERIENCE

BANK OF AMERICA | Fraud Specialist
July 2020 - Present
- Front line assistance in high volume calls for customers in regards to fraud
- Placed/Removed blocks as necessary on DC|CC|DCA
- Determined if true caller was making changes on account and protected as necessary

MARS RISING NETWORK | 3D Technical Artist
July 2021 - Present
- Assisted in rendering 3D models in a highly realistic commercial ready state
- Animated commercial ready videos showcasing use of product for client
- Facilitated the transfer of files across programs and made sure everything integrated well into workflow
