PROJECTS

EXPENSE TRACKER | Webapp
React | Tailwind | JavaScript | Auth0
- A mini Expense Tracker where you can keep track of an expense by title, date and amount
- Expenses are saved on **Firebase** database so users can come back to it and change as needed
- Used Tailwind for making responsive designs tailored to mobile first
- For security added **Firebase** authentication before expenses may be edited

FREE THE GAMES | Website
HTML | SCSS | JavaScript | AXIOS
- A website created to view information on all current free games to play
- Used **Axios** to fetch API data to dynamically display all the Games info
- JavaScript was used to dynamically create and display HTML elements with CSS classes
- Made dynamic filtering of categories by tag as well as dynamic pagination added by JavaScript
- Used Intersection Observer for animations to start interactively by viewer

DRESS-UP GAME | HTML Game
HTML | SCSS | JavaScript
- Game where you pick from a set of cloth items and features to create your own customized character
- Created logic flow that made dynamic hue and brightness change possible dynamically

DRAMA LISTER | Windows Program
C# | Windows Forms
- A CRUD program with the goal to capture, store, update, and read listings of Shows/Dramas watched
- Each show/drama listed has their own property of rating, comments, genre, episode count, etc
- Lists can be saved as an encoded binary file as well as read back when loaded

EXPERIENCE

BANK OF AMERICA | Fraud Specialist
July 2020 - Present
- Communicated to customers clearly the logic for use of app/website for fraud prevention and tech issues
- Blocked/Unblocked CC|DC|DCA as necessary through uses of various private business software
- Determined which method was needed to service client depending on need and software available

COMPUTER GENERATED SOLUTIONS | Order Support Agent
Feb 2019 - June 2020
- Fixed orders stuck in system using methods such as **xml** and **html** editing in browser and pushing/pulling orders with private business CMS
